Security risk assessment report

Part 1: Select up to three hardening tools and methods to implement
Password policies Firewall maintenance Multi Factor Authentication

Part 2: Explain your recommendations
The password policies need to be reiterated as passwords are confidential information that cannot be shared among employees. The NIST's password policy recommendation for salting and hasshing the password needs to be implemented. The Firewall maintenance entails checking and updating security configurations regularly to stay ahead of potential threats. Firewall rules can be updated in response to an event that allows abnormal network traffic into the network A security measure which requires a user to verify their identity in two or more ways to access a system or network. MFA options include a password, pin number, badge, one-time password (OTP) sent to a cell phone, fingerprint, and more.
